

#### **Mobilizing Investments in Nitrogen Management** Naiana Milea- Director

#### **ROMANIA**

### Significant impact on the Black Sea

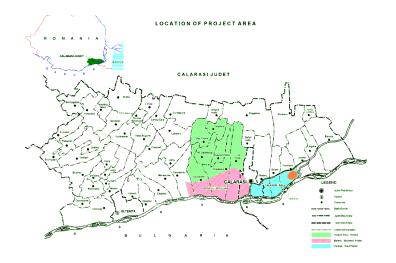

- Almost 1/3 of the Danube River Basin surface
- More than 1/3 of the Danube River length (1,075 km)
- 99% of the Romanian territory is in the Danube Water Basin
- More than 3 million farms, with 90 % under 5ha covering almost 30 % of the total agricultural

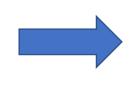

## Nutrient Pollution Control in Romania **2002 - 2007**

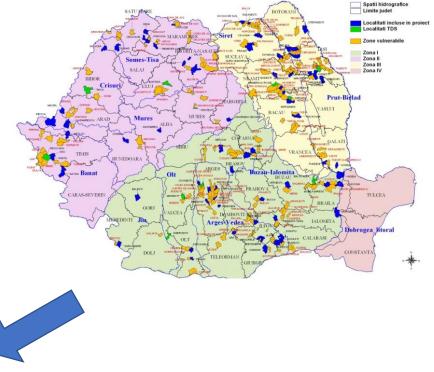

### Nutrient Pollution Control in Romania **2008 - 2017**

Nutrient Pollution in Romania 2017 – 2022

Country-wide project, Given that entire territory of Romania applies the Nitrate Directive

#### **Investments**

manure management sewage systems (about 100 investments)

Improvement of the water monitoring system

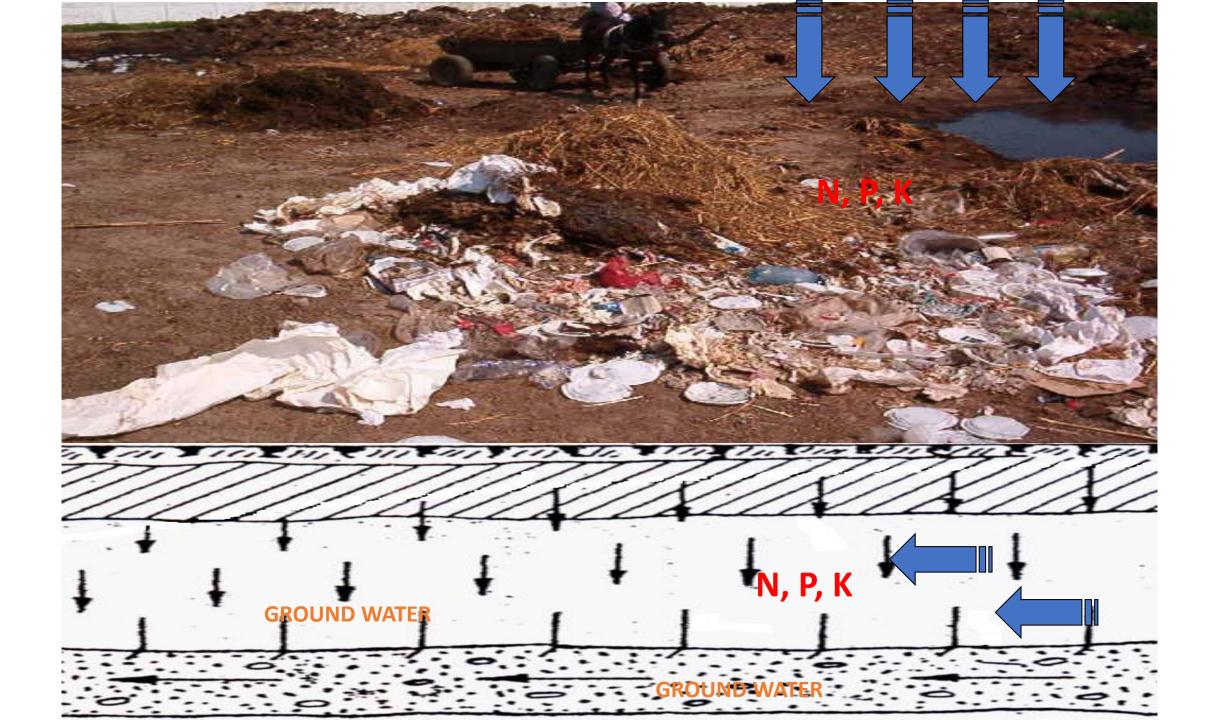

INPCP AF Behavior changes at farmers' level

Institutional strengthening

Updating legislation on soil and water protection

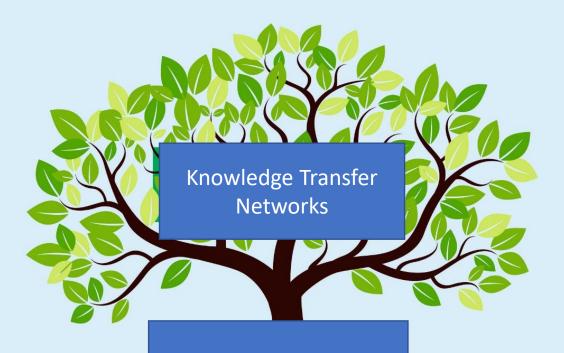

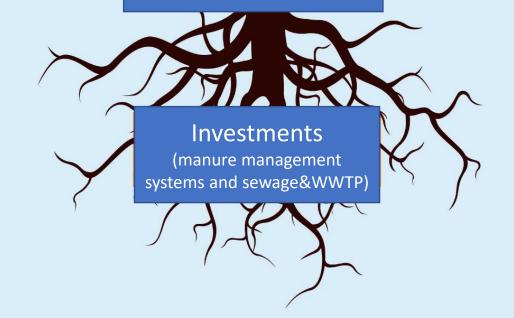

#### Public Information

### **Biogas**

#### **Community level solution for manure management**

**Functional Guarantee** 

1. Electrical Power (hourly production)

2. Thermal Power (hourly production)

3. Concentration of H2S from biogas

Minimum (or Maximum, as

appropriate) Requirement

Minimal 370 kW

Minimal 424 KW

Maximal 200 ppm

# Actions to attract the interest of decision makers, investors and local representatives

#### Four levels of action:

- I. Involve the authorities, beneficiaries and other stakeholders in the process of designing the infrastructure for achieving visible results on water quality demand driven and customized investments;
- II. Collaborate and support local authorities to implement efficient systems for nutrient management *Monitoring and control compulsory*;
- III. Inform, dialogue and increase awareness in order to induce changes in the current behaviors;
- IV. Monitor the soil and waters quality and the effect of the remedial measures. Communicate the results and future measures.
