

Table 1
COORDINATION/GLOBAL GOVERNANCE

What is there:

- Basel Convention
- MARPOL
- Stockholm Convention
- SAICM
- Regional Seas programs

GMPL needs expanding under resources , capacity building, ownership, conflicting priorities = potentially based on the SAICM model

What is needed:

Who:

<p>A donor databank = open source (incl private sector funding)</p> <p>MARPOL: leadership FAO to increase signatories</p> <p>Understanding plastic alternatives (eg. Bioplastics – not really a solution)</p> <p>Framework for multistakeholder body (voluntary body for national and international level (stakeholders all across the lifecycle chain) -> National plastic strategy</p> <p>Grouping countries according to shared challenges/capacities (eg. SIDS)</p> <p>Harmonizing and universalizing standards, definitions, testing protocols and methodologies (production to end of life) Eco-labeling – developing and harmonizing sustainability, and globalizing transparency</p> <p>New secretariat, with enough funding to take a lead in this work, cfr Global Platform of Regional Seas Programs,</p> <p>10YFP SCP, GPMC – increased coordination – Hub and expand to involve members</p> <p>IP – incentive better product design</p>	<p>UNEP repository – countries briefing each other</p> <p>FAO / IMO</p> <p>State research institutes,</p> <p>At national level, eg Min for Env, Solid Waste commission</p> <p>ISO, GESAMP, APEC, NOAA, ASTM</p> <p>ISO ?</p> <p>UNEP in Program of Work</p>
---	---

Capacity building EDC definitions, expanding pre-existing instrument	
---	--

Table 2
PLASTIC PREVENTION

Global:

Standards, design, labeling (ISO, WTO, WHO)
Elimination of intentionally added microplastics (knowledge sharing for national regulation)
Sustainable packaging coalition

Regional:

Support recycling infrastructure
Database SVHC (EU)

National:

Plastic strategies, with involvement of all stakeholders (targets)
Matching recycling infrastructure
Waste water treatment

Local:

Waste management plans
Zero-waste strategies

Table 3
Means of Implementation

Funding coordination (registry, new patterns, scope, ..)	New body (under UNEP)
Strengthening existing nat/reg/intern instruments (national/reg action plans)	Instruments: mandate for upstream
Capacity building	3 rd part coordination body for business: voluntary CSR
Research coordination (international), need for standard modelling on leakage, knowledge on good alternatives for single use plastic, etc	Coordination of existing research groups. Single standards (cfr Climate)
Policies for market based incentives for behavior change (subsidies, tax reforms)	

<p>Education and awareness raising (private/public)</p> <p>Solution catalogue, good practices and technologies</p>	<p>Platform for idea exchange (small island developing states; business; ...)</p>
